### COVION ORGANIC SEMICONDUCTORS GMBH

US Patent Application 10/532,185 Rhodium and iridium complexes

Dear Colleagues:

We refer to our order letter dated March 22, 2005.

Please find enclosed the International Preliminary Examination Report according to the above mentioned case.

Please confirm the receipt by return fax.

Sincerely you

uderschmidt, Schüler & Partner

### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 03/10652

| v. | Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; |
|----|--|
|    | citations and explanations supporting such statement   |
|    |  |

| 1. | Statement                     |        |               |       |
|----|-------------------------------|--------|---------------|-------|
|    | Novelty (N)                   | Claims | 1-17          | YES   |
|    |                               | Claims |               | NO .  |
| ,  | Inventive step (IS)           | Claims | 6, 9          | YES   |
|    |                               | Claims | 1-5, 8, 10-17 | NO    |
|    | Industrial applicability (IA) | Claims | 1-17          | YES   |
|    |                               | Claims |               | NO NO |

### 2. Citations and explanations

This report makes reference to the following documents; the same numbering will be used throughout the procedure:

D1: EP-A-1191613

D2: WO-A-02/060910 (mentioned in the application)

D3: WO-A-02/068435 (mentioned in the application)

D4: Clarke et al. J. Organomet. Chem. XP004193182

(mentioned in the application)

D1 pertains to tris-ortho-metalated Rh and Ir complexes with identical ligands. D2 also pertains to complexes having three identical ligands. Independent claims 1-3 do not comprise complexes of this type.

In the metal complexes described in D3, H or a halogen, but not a nitro group, is in the para position to the coordinating carbon atom. Novelty is thus established.

The subject matter claimed in the application is novel, but lacks inventive step, since it differs from the prior art (D1-D3) only in minor structural modifications that follow in an obvious manner from the combination of D1 and D2 or D1 and D3.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 03/10652

The applicant refers in this connection to pages 17-18 of the description where, according to the applicant, advantageous properties of the claimed compounds are described. Point 1 (page 17) pertains to intermediates, the inventive step of which can also derive from that of the end products.

However, this is not the case, since points 2 and 3 pertain, not to a surprising effect, but merely to general information which would be known to a person skilled in the art even without knowledge of the invention, since the use described, for example, in D1 and D2, of the ligands for the same purpose would otherwise be excluded.

D4, which is indicated in the description (page 2, lines 31-35), is the closest prior art with respect to the preparation process. The nitrating reagent used in D4 is Cu(II) in  $Ac_2O$ .

Since no surprising effect is demonstrated, claims 1-5, 8 and 10-17 must be considered obvious.
